

**The purpose of the fcB2B 832 Price / Product Catalog is used to electronically provide the prices of products in the form of a catalog. The fcB2B 832 replaces the paper catalog and is used by suppliers to provide product information to their customers. The information is used to keep the retailer's system current with new product introductions, price changes and any product updates.**

What does the fcB2B 832 include?

- Currency code related to the prices sent in the catalog
- Account # of the receiver of the catalog
- Manufacture name or product brand name
- Unique SKU number (used to identify specific style, color, size and the backing for ordering)
- Style number and description
- Color number and description
- Backing of the product
- Size information of the product
- Product dates (Effective, dropped, pending drop)
- Associated product SKU's (additional products that are available specific to the style or SKU)
- Gauge (if appropriate for product)
- Product Classification (list available in Core Rules document)
- Primary component
- Composition
- Warranty information
- Pattern repeat / drop / length / width (if appropriate for product)
- Length / width and height of product (Nominal and actual measurements)
- Shipping Weight
- Base unit information (weight, LF coverage)
- Selling units (number of base units in case)
- Pricing (List price, promotional price, quantity break price)
- Price dates (Effective, dropped, pending drop, promotion start / end)
- URL's of product images or spec sheet
