

## **fcB2B Standard**

### Price Catalog Web Service Executive Summary

fcB2B has defined a series of web services for use by the industry to facilitate a common framework which suppliers and their customers can use to establish simple and low-cost electronic data for software applications. Web services are enterprise applications that exchange data over the internet.

The Price Catalog web service is designed to automate the full or partial catalog resend request. This replaces the typical process of sending an email, calling the B2B contact or visiting a website to request a catalog. This service is used by the requestor of the catalog to retrieve a list of catalog options the supplier allows and then submit the request for the catalog. A confirmation is returned with a timeframe of when the catalog will be available.
